

- 1/ Adjust the frame to the best comfort of your client
- 2/ keep the Plano demo lens on the frame while measuring
- 3/ Match the center point of the frame bridge to the basic line on the chart.
- 4/ keep two temples at balance on the same reading position of the angle chart.
- 5/ keep the convex surface on the lenses perpendicular to the chart.
- 6/ read the angle at the end of the lenses at temple side and keep both reading of angle at the same.

Example:

The reading of angle of the sample frame on the chart is 7 degree.
