TRILOGY
LENSES

How do I choose the best lenses for me?

Just about anyone who wears glasses is a candidate!

Most people benefit from Trilogy lenses.

Clear & Crisp Vision

Want clear, crisp vision? Compared to the other thin and light materials available, your vision will be sharper. This is because Trilogy reduces something called “chromatic aberration”, the annoying tendency of some lenses to create colored blur around objects. So if your work or hobbies demand clear vision, or if you are an older patient whose visual acuity needs a little extra help, ask your doctor for Trilogy.

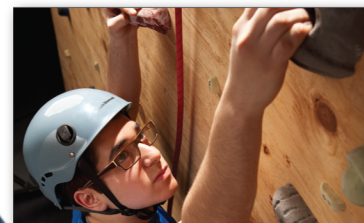

Light & Thin

Want comfort and good looking lenses? Trilogy lenses are made of an ultra lightweight material that practically floats on water. They are thin as well as lightweight, so not only are your lenses cosmetically appealing, your glasses won't slide down your nose or leave nasty marks on the bridge of your nose. And Trilogy has the material strength that makes it a great choice for some of the most stylish frames that require drilling into the lens.

Safety

Want safer lenses? For impact resistance many times the FDA requirement, you can have Trilogy or you can have polycarbonate, a lens which may compromise your visual clarity. Why compromise? With Trilogy you can protect your vision and enjoy superb optics. And for added safety, Trilogy lenses are 100% UV blocking.

Choose the balance of Trilogy®

CHOOSE CLEAR, CRISP VISION!

Trilogy uniquely offers you better optics — your vision will be sharp and acute without the blur you can experience with other thin and light lenses. And isn't that the most important thing you want in your lenses?

AREN'T THERE OTHER

“THIN AND LIGHT” LENSES?

Yes, there are polycarbonate and “high-index” lenses that are thin and light; but “thin and light” is only part of the story. Compared to these other options, Trilogy is lighter and has superior optics. It also has better impact resistance than most high index materials. For most prescriptions—the approximately 92% for mild to moderately strong near or far sightedness— Trilogy is as thin, or thinner than, the other “thin and light” materials.

For really strong prescriptions, talk with your eye care professional about which lenses will be your best option. The clear, crisp vision and lighter weight advantages Trilogy offers are especially dramatic in strong prescriptions, but occasionally there may be tradeoffs between weight and thinness.

These comparisons are based on the same center thickness (1.5mm) and edge thickness (2mm) and a 50mm found diameter lens.

WANT THE BEST FEATURES

ALL IN ONE LENS?

Nothing is as important to your quality of life as your vision. If you want to enhance your vision and your comfort and safety, Trilogy is the choice for you.
